EXPERIENCE

Software Engineer Intern

Sep 2026 - Dec 2026

*Tesla**Fremont, CA*

- Incoming Software Engineer Intern on the **Autopilot Observability** team for Fall 2026.

Software Engineer Intern

Jun 2026 - Aug 2026

*Amazon**Seattle, WA*

- Designed, built, owned, and shipped **2+** projects for the **Prime Video Recommendations** team.
- Rewrote and optimized a **Lambda-based** image filtering service by utilizing a **DynamoDB** cache and **Apache Spark** jobs on **Apache Hive**, increasing pipeline throughput by **46x** and reducing API latency by **70%**.
- Developed recommendation components for the **Amazon.com** homepage, serving **200M+** customers monthly, **90M+** customers daily, and handling **55K+** transactions per second with **deep learning** methods.
- Utilized **CloudWatch** for observability, ensuring **99.99%** service availability across **390M+** daily requests.

Software Engineer Intern

Jan 2026 - Apr 2026

*Cloudflare**Austin, TX*

- Built, owned, and shipped **4+** high-impact **end-to-end** features for Cloudflare's **beta** product, **Containers**.
- Scaled and architected a **15x** increase in container resource limits, leading to an enterprise contract of **\$130M** and generating **\$100K+** in revenue from users deploying production **AI agent** workloads.
- Implemented regional and jurisdictional deployment constraints for **Containers** and **Workers**, reducing latency by up to **87%** by allowing deployment to **9** global regions, **2+** major cities, and **2+** compliance domains.
- Eliminated redundant updates in **Durable Objects** via state change detection, reducing writes by **57%**.

Software Engineer Intern

Oct 2025 - Dec 2025

*Handshake**San Francisco, CA*

- Optimized multimodal pipelines with **LangChain** and **Python**, improving downstream task accuracy by **19%**.
- Applied **diffusion models** for **synthetic data** generation, improving efficiency by scaling dataset size by **300%**.

Quantitative Software Engineer Intern

Jun 2025 - Aug 2025

*Morgan Stanley**New York, NY*

- Migrated a **C++** trading application to the web, reducing latency by **50%** for **3000+** quants and traders.
- Developed **Python** APIs for data ingestion, improving report quality by **45%** and reducing manual work by **33%**.
- Optimized **Java** deal processing tools, reducing processing time by **55%** and increasing daily processing by **200%**.

PROJECTS

ClickHouse | *Go, ClickHouse, Database Drivers, HTTP, Batching, Compression, Distributed Systems*

- Authored and merged **3+** pull requests to **ClickHouse**, improving compression, security, and batch ingestion.
- Reviewed and merged **4+** pull requests as a core open source maintainer, supporting new features and fixes.
- Corrected **TLS** configuration and improved compression behavior across **2+** **HTTP execution** paths.

Twilio | *GraphQL, React, TypeScript, Tailwind CSS, Amplitude SDK, Twilio SDK, React Router, Vitest*

- Authored and merged **10+** pull requests to the **Twilio One Console**, improving **DX** for **335K+** organizations.
- Shipped a developer tool that allowed state management of **3700+** feature flags, impacting **5700+** developers.
- Implemented code-splitting and feature-flag filtering, reducing render time by **40x** and CPU parse time by **50ms**.

OpenTelemetry Collector | *Go, Prometheus, OpenTelemetry, Observability*

- Contributed **3+** open source pull requests to **OpenTelemetry**, enhancing reliability and correctness.
- Enabled re-aggregation for data receivers, ensuring **100%** aggregation completeness and eliminating partial data.
- Improved data fidelity by preserving **11** log fields in the **Cloudflare** receiver that were dropped during ingestion.

TECHNICAL SKILLS

Languages: Python, TypeScript, Go, Java, C++, C, JavaScript, SQL, R, C#, GLSL, HTML, CSS**Frameworks:** React, Angular, FastAPI, Spring Boot, Next.js, Node.js, Express.js, Tailwind CSS, tRPC**Libraries:** scikit-learn, PyTorch, TensorFlow, NumPy, Pandas, Flask, Django, OpenCV**Tools:** Git, Docker, Kubernetes, Grafana, Prometheus, OpenTelemetry, ClickHouse, Kibana, Elasticsearch, Jaeger, Cloudflare, Vercel, Amazon Web Services, Microsoft Azure, Google Cloud Platform, Redis, Apache Spark, Apache Hive, Hadoop, MongoDB, Jupyter Notebook, Linux, PostgreSQL, SQLite, Selenium, Playwright, Vitest, Prisma, Unity
